

	<p>Liechtenstein Status / Version 9 Contract: At HG meeting in November 2018, it was decided to accept Liechtenstein on the CH platform. As a consequence, Liechtenstein has been added in ONP contract: Version 9 contains new clauses on porting specifying that porting can only be done on a national level between operator of the same country. Version 9 is currently used with new operators. Teldas will soon ask all operators to sign the latest version, once WS clauses have also been added to it. Version 9 is available in track changes on the Teldas webpage, material changes concern clauses 3.2.1.1 and 3.2.1.4.</p> <p>B. Reichmuth announces that Austria might be interested. A. Christen confirms and was in contact with regulator and that they already decided for another supplier.</p>	
3	<p>INet Release 2019 It is proposed to have a small INet-Release in 2019 with no impacts on the operators' SSH interface. Most changes are bug fixes or small features, among which ones:</p> <p>CR1291: Change request for new country flag (for Liechtenstein). This will allow only ported numbers of Switzerland or only of Liechtenstein (on WS).</p> <p>CR1288: Automatic Cancel of Work Order if no Represent is sent after x days. This will help because there will not be anymore Timeouts after Reject.</p> <p>CR1182: will help to avoid erroneous rejects for prepay when departure sms is received</p> <p>Full list of change requests can be found on the Teldas Webpage under Projects > INET-Server Releases > INet-Releases 2019.</p> <p>WG recommends all the changes and will do tests to assure that internal systems are not affected.</p> <p>The HG approves release content.</p>	<p>Approval</p> <p>Action: TSP to participate to UAT INet-Release 2019 and confirm project planning (WG AI1098)</p>
4	<p>ONP User Contract Example of Wholesale Partner porting many number raises question whether there should be an administrative fee covering the costs rather than a fee per number. OFCOM's view: needs to be settled by providers. HG agrees not to define a price tag for mass portings in the ONP User Contract (Appendix 2), because the porting costs varies due to the different set up at different providers. Clause 2.3.3 will be changed to the following text: <i>"For "mass portings" transactions as defined in (11), the porting fee must be agreed with the Donor Operator on a bilateral basis."</i></p>	<p>Decision not to introduce administrative fee, but to change clause 2.3.3 in Appendix 2</p>
5	<p>INA Contract There are cases of smaller TSPs having implemented INA 0800/084x numbers without having signed the Swisscom Transit Service Contract.</p>	<p>Decision not to change</p>
